AGRONOMIC CONSIDERATIONS

A high analysis granular product for correcting Zinc deficiencies in soils. Partly acidulated for ready availability with the remaining Zinc in finely divided oxide form for building soil zinc reserves. Lower in cost than pure Zinc Sulfate sources but equally effective in field performance. Especially good where high pH soils require larger Zinc applications and where extreme Zinc deficiency occurs.

GENERAL RECOMMENDATIONS

Applications of this product should be based on soil test and/or leaf analysis results. Typical broadcast applications use 2-5 pounds per acre (as Zn), or 1-3 pounds per acre (as Zn) in a starter band.

MANUFACTURING CONSIDERATIONS

Use normal bulk blending procedures. This product is intended for use in mixing or blending with other fertilizer materials to produce products to meet the nutritional needs of crops.
